Interactive Art Selling Website

🔍 Ashton's Art Website

Lauren Gamber & Ryley Sanden

Identifying a Problem to Solve

Our friend Ashton Lewis ...

is a very talented artist
with no means
to display and
sell her art

Why no database?

- Simple answer, Ashton is bad at technology!
- Having the information collected into an email sent to the client is realistic to her and something that she can easily access.
- EmailJS is a Javascript library that allows developers to send emails directly within in the code, no backend server needed = perfect for Ashton!

Application Structure: Client (Ashton)

**User-based
Interactive
Website**

data generated sent to
client

**Commissions
Acquired for
Client**

Lauren's Work

- Researching EmailJS vs Database.
- Building the skeleton of the website.
- Set up EmailJS library in project.
- Created new gmail attached to website for the client.
- Created the drawing component in the part works page.

Ryley's Work

- Capturing the vibe
- Making and updating the GitHub repo
- Styling and formatting the website using CSS and adding some extra js components to.
- Added to the drawing component in past works.
- Added more input fields in the commissions form.

Capturing the Vibe

Indigo dye

5296A5

Blue (Munsell)

DEF2C8

Tea green

646536

Dark moss green

483D03

Drab dark brown

Used coolers.co to
create a color scheme
that fit Ashton and
complimented her art.
